

NEIL PATRICK POTOT

Technical Lead / Mobile Solutions Architect | Senior Flutter Engineer | Mobile Architecture & Delivery

Philippines | neilpotot@gmail.com | linkedin.com/in/neil-patrick-potot

PROFESSIONAL SUMMARY

Senior Mobile Engineer and hands-on Technical Lead with 7+ years of experience designing and delivering secure, scalable mobile and web platforms across fintech, enterprise, and consulting environments. Strong background in Flutter, Android native, Clean Architecture, API-driven product delivery, authentication flows, CI/CD, testing, reusable component systems, and developer enablement.

Positioned for a Technical Lead / Solutions Architect hybrid role: able to translate business requirements into technical direction, design implementation approaches, guide engineering standards, mentor developers, review technical decisions, and collaborate across product, backend, QA, platform, and stakeholder teams. Currently expanding solution-architecture depth through a trusted-alpha React Native + Supabase product that combines AI workflows, RLS-backed data design, Edge Functions, RPC/BFF-style hardening, E2E gates, GitHub Actions automation, and real-user feedback operations.

TL / SOLUTIONS ARCHITECTURE FIT

Solution Design	Converts product requirements into mobile architecture, data flows, API integration points, release plans, and maintainable implementation paths.
Technical Leadership	Guides coding standards, reviews implementation decisions, mentors developers, supports delivery planning, and improves engineering consistency.
Mobile Architecture	Flutter, Dart, Android native, method channels, Clean Architecture, modular feature design, reusable UI/component systems, and state management.
Secure Product Delivery	Authentication, MFA, JWT/OAuth, token-based session handling, account protection, recovery routing, and regulated fintech user flows.
Delivery & Quality	CI/CD, GitHub Actions, TDD/automated testing, debugging, production issue resolution, Agile/Scrum coordination, and cross-functional execution.

TECHNICAL SKILLS

Mobile	Flutter, Dart, Android Native, React Native, Expo, Method Channels, iOS/Android delivery
Architecture	Clean Architecture, modular feature design, component-based architecture, system design, reusable project templates
State & UI	Bloc, Cubit, Riverpod, Provider, responsive UI, reusable design systems, mobile-first product UX
Backend & Data	REST APIs, Supabase, PostgreSQL, Edge Functions, RPCs, NestJS exposure, TypeScript APIs
Security & Auth	MFA, JWT, OAuth, RLS, token-based auth, secure API integration, recovery flows
Engineering	CI/CD, GitHub Actions, Playwright E2E, TDD, code review, debugging, release coordination

PRODUCT / ARCHITECTURE CASE STUDY

Job Application CRM - Founder / Builder | React Native, Expo, TypeScript, Supabase, Edge Functions, GitHub Actions, AI Workflows

Trusted-alpha personal product built and dogfooded to manage job discovery, AI fit assessment, tailored resume/cover-letter drafts, application tracking, interviews, offers, and feedback-driven product improvement.

- Architected an end-to-end full-stack product across Expo web, Supabase Auth/Postgres/Storage, Row Level Security, RPCs, Edge Functions, and AI service boundaries, keeping service-role and AI keys server-side.
- Designed the core product workflow from job lead capture to AI extraction, fit assessment, tailored document generation, external application handoff, apply tracking, interview/offer tracking, and career evidence capture.
- Hardened browser-visible data access by migrating sensitive application, lead, profile, account export, and detail-loading flows from broad client table reads to RPC or Edge Function boundaries.
- Built a trusted-alpha delivery system with Playwright E2E coverage, cross-user RLS tests, authenticated CI, web export checks, VAPT/security notes, release gates, deploy evidence, and reduced-cost GitHub Actions workflows.
- Created an owner-in-the-loop automation workflow where in-app feedback is AI-triaged, converted into labeled GitHub issues, synced to a project board, repaired through local-worker PRs, quality-gated, reviewed, shipped, and closed with deploy evidence.
- Added product operations controls including AI maintenance toggles, scheduled discovery, high-confidence lead notifications, weak-lead cleanup, automation health checks, pending-ship reminders, and stale feedback nudges.

PROFESSIONAL EXPERIENCE

ASCENDION

Senior Flutter Developer | Dec 2024 - Present

- Led secure Flutter feature delivery for Maya account protection flows, integrating REST APIs, MFA, token-based authentication, and native method-channel communication in a regulated fintech environment.
- Designed and implemented profile-aware recovery routing across Clean Architecture layers, coordinating API data, domain rules, Cubit state, and user-facing recovery experiences.
- Delivered AFASA-aligned Time Guard locked-account experiences for transaction pause scenarios, including cooldown messaging, recovery options, restriction banners, and maximum-attempt UX states.
- Hardened authentication-adjacent flows by resolving stale restriction-refresh state issues and expanding targeted coverage across datasource, repository, use case, Cubit, and UI paths.
- Collaborated with product, backend, QA, and platform teams to deliver secure, consistent, and scalable mobile recovery experiences.

XAM CONSULTING

Senior Developer - Flutter | Mar 2023 - Sept 2024

- Built high-quality Flutter applications and reusable UI components for consulting clients and internal engineering teams.
- Supported architecture guidance, code review, quality practices, and maintainable Flutter implementation standards across application builds.
- Contributed to project accelerators, developer experience improvements, and reusable component patterns that improved delivery consistency.
- Awarded Lead with Quality for implementing and sharing Flutter best practices across application builds.

WHITE CLOAK TECHNOLOGIES, INC.

Engineering Manager & Senior Software Engineer | Dec 2021 - Mar 2023

- Led the standardization of Flutter development practices across 8 engineering teams, improving consistency, scalability, and maintainability across projects.
- Proposed and implemented company-wide Clean Architecture and CI/CD standards for Flutter projects.
- Built internal CLI tools and reusable project templates that accelerated project setup and improved engineering consistency.
- Mentored developers on Flutter architecture, code quality, delivery practices, and maintainable engineering workflows.
- Partnered with product and engineering teams to improve delivery predictability, technical execution, and architectural alignment.

WHITE CLOAK TECHNOLOGIES, INC.

Journeyman Software Engineer & Android Developer | Jan 2021 - Dec 2021

- Served as de facto Team Lead and Deputy Scrum Master for the Bayad app project, supporting Agile delivery, sprint execution, and team coordination.
- Delivered Android and Flutter features while improving project architecture, CI/CD pipelines, and TDD practices.
- Supported planning, implementation, and delivery alignment across engineering stakeholders.

FFUF MANILA INC.

Mobile Application Developer | Dec 2019 - Jan 2021

- Developed and maintained enterprise Android applications, including iMOW and STIHL, using SOLID principles and maintainable mobile development practices.
- Coordinated Agile delivery with Germany-based project managers and contributed to ongoing product improvements.

GDS LINK ASIA PHILIPPINES

Junior Software Analyst - Android Developer | Feb 2019 - Dec 2019

- Maintained enterprise Android applications and translated user feedback into actionable product improvements.
- Supported mobile application updates, issue resolution, and usability enhancements.

SELECTED TECHNICAL LEADERSHIP & ARCHITECTURE HIGHLIGHTS

- Standardized Flutter engineering practices across multiple teams, including Clean Architecture, CI/CD quality gates, reusable project templates, and internal CLI tooling.
- Hands-on leadership in regulated fintech product flows involving MFA, token-based authentication, account protection, restriction states, and recovery routing.
- Experience bridging implementation, quality, and stakeholder alignment through code review, mentorship, Agile delivery, and cross-functional collaboration.
- Built and operated a trusted-alpha full-stack product using React Native, Supabase, Edge Functions, TypeScript, Playwright, GitHub Actions, and AI-assisted workflows.

HONORS & EDUCATION

Honors & Awards	Rockstar of the Year - Mobile, White Cloak Technologies Lead with Quality Awardee, XAM Consulting Trainer Awardee - Android
Education	Technological Institute of the Philippines — Bachelor of Science in Information Technology 2012 - 2019
Best-fit roles	Technical Lead, Mobile Solutions Architect, Lead Flutter Engineer, Senior Mobile Engineer with architecture ownership.
